FOREWORD

In 2015, India became a signatory to **Brasilia Declaration** on Road Safety, where it committed to reduce 50 % of its road crash deaths by 2020. In India, road crashes kill about 1,50,000 person every year. In Maharashtra, over 13,000 deaths occur due to road traffic collisions while over 20,000 people sustain non-fatal injuries from such accidents. These injuries are often, responsible for causing various kinds of disabilities. Loss of Life and property due to traffic accidents also negatively affects gross national productivity, impacting the economy at macro levels.

The continual increase in vehicular population and capacity limitations of existing road networks, carriageways have resulted in immense challenges in traffic management, especially in cities. The challenge of preventing accident is very acute in highway transportation due to complex flow patterns of vehicular traffic; mixed traffic along with pedestrians; noncompliance of traffic rules; road infrastructure issues etc which aggravate the situation. These are causative factors leading to accidents, road rages, flare-ups and altercations among/ between road users and enforcements authorities.

'Road Accidents in Maharashtra -2018', provides statistical information on Road Accidents and reasons thereby of such mishaps in urban and rural areas. I hope the information helps the Police Force to develop strategic and tactical plan for reducing road accidents and fatalities. It will also help all stakeholders like road engineers in identifying accident-prone areas and implement requisite short-term and long-term measures to eliminate primary causes.

Breakthrough technologies and innovative application need to be harnessed to provide safer roads, at optimal costs. Deploying data sciences and analytics to understand and interpret nuances of the endless information at our disposal made available through this statistical presentation will help us in taking the first step in bringing about the much desired change in curbing fatalities on road.

Subodh K. Jaiswal
(S. K. Jaiswal)
Director General of Police
Maharashtra State

PREFACE

India, with just 3% of the world's vehicles, accounts for about 12% of the world's road deaths! The human cost involved in this is enormous, and so is its impact on the economy. A World Bank study has found that if India were to successfully halve road deaths and injuries, it could potentially add 14% to its GDP per capita.

Maharashtra has the largest road network in India connected to 6 neighbouring States. The length of National Highways in Maharashtra is around 17,725 km. Maharashtra has a large State Highway Network. 99.5 per cent of the villages in the state were connected by all-weather roads as of March 2018.

Road accidents in Maharashtra in 2018 have resulted in over 13,000 deaths, the highest in the last three years, and around 80 per cent of these were caused due to human error. A major part of this was caused by rash driving, over speeding, signal jumping, not wearing helmet or seat-belt, driving against the traffic flow and overtaking dangerously. A huge 66 per cent of the fatalities comprise of pedestrians, two-wheeler riders and cyclists combined.

Reasons: The State of Maharashtra has its own unique characteristics in terms of vehicles on the road. Presence of Heavy Industries, Major Agricultural Districts, Ports, Metropolitan Cities, Major Educational Hubs, Commercial Capital of India (Mumbai) results in varied modes of transport and vehicles on the roads of Maharashtra. This coming together of Heavy Vehicular Traffic, Fast Moving High-end Vehicles and susceptible Road Users creates a huge risk factor due to increased vulnerabilities leading to crashes. Additionally, complete disregard of Personal Safety by road users by not wearing Helmets, Seat Belts, and utter disrespect of Traffic Rules exacerbate the situation further, leading to higher fatalities and grievous injuries.

Road Crashes are both predictable as well as preventable. As per WHO, a safe system on road protects responsible road users from death and serious injury by taking human error and frailty into account. In other words, it acknowledges that humans will make mistakes on the road, but the price they pay for this mistake should not be death or serious injury.

Unfortunately, the impact of vehicle accidents on the underprivileged is often disproportionate. Pedestrians, cyclists and motorcyclists, usually hailing from low and middle income strata, account for more than 50 % of the road traffic deaths in India. Road accidents can affect people's livelihood and push them into poverty. Studies show that poor households go into debt by borrowing money to cope with the additional medical expenses, in addition to losing income after an accident.

With a right blend of interventions viz. Engineering, Education & Awareness and Enforcement, it is definitely possible to bring down these daunting figures. Containing road accidents needs to be a multi-sectorial effort that involves law enforcement, governance, engineering, awareness, post-accident trauma

care and management. Hence, impetus should be on making roads safer by improving infrastructure on highways, patrolling the roads and highways, carrying out research into road safety, upgrading post-accident care, and raising awareness about road safety.

Establishing and maintaining a data management system that monitors and analyses road accidents will help identify accident hot spots and enable the authorities to pin point what needs to be done to make these patches safer. Broadening the scope of monitoring and analyses can help us open up the

OVERVIEW

Roads, across the globe, see varied users ranging from cars, cabs, buses, trucks, motorcycles, mopeds, bicycles, carts, pedestrians, animals, pets, and a lot more. The economic and social development of a country has direct relation to its road infrastructure and the travel and transport supported by it. Ironically, each year, these very means of development also bring with it several miseries. Road crashes lead to millions of deaths and injuries.

Each year, a staggering 1.35 million people are killed on roadways around the world. An additional 20-50 million are injured or disabled. Road accidents are estimated to be the eighth leading cause of death globally for all age groups and the leading cause of death for children and young people in the 5–29 age groups. More than half of all road traffic deaths occur among young adults aged 15–44. More than half of all road traffic deaths are among vulnerable road users viz, pedestrians, cyclists, and motorcyclists.

It may be noted that over 90% of all road fatalities occur in low and middle-income countries, which have less than half of the world's vehicles. Road traffic injuries not only cause considerable economic losses to individuals and their families but also to nations as a whole. These losses arise from the cost of treatment as well as lost productivity for those killed or disabled by their injuries, and for family members who need to take time off work or school to care for the injured. Road traffic crashes alone cost most countries an alarming 3% of their gross domestic product.

National Trend:

Since the year 2000, while road network in the country has grown by 39%, the number of registered vehicles has grown incredibly, by about 158%. While growth in road network will be limited, a constant increase in the number of vehicles on roads leads to congestion and road fatalities. In 2015 alone, there were about five lakh road accidents in India, which killed approx 1.5 lakh people and injured almost five lakh people.

Incidentally, impact of road accidents on the underprivileged is often quite disturbing and unsettling. Pedestrians, cyclists and motorcyclists, usually hailing from low-and middle-income strata, account for more than 50 percent of the road traffic deaths in India. Road accidents affect people's livelihood and push them into poverty. Studies show that the poor households go into debt by borrowing money to cope with the additional medical expenses, in addition to losing income after an accident.

India, as a signatory to the Brasilia Declaration, intends to reduce road accidents and traffic fatalities by 50% by the year 2020. Globally, India is ranked 90th in road quality and safety.

Maharashtra Trends:

Maharashtra has the largest road network in India. 34 National Highways connect Maharashtra to its six neighbouring States. The length of National Highways in Maharashtra is around 17,500 KMs and length of state highway is around 35,000 KMs. In April 2002, the 95 km long Yeshwantrao Chavan Mumbai-Pune Expressway, the first access controlled toll road project in India, was made fully operational. Nintynine per cent of the villages in the state are connected by all-weather roads as of March 2018.

The Maharashtra State Road Transport Corporation (MSRTC) has been providing passenger road transport service in the public sector since 1948, linking most of the towns and villages in and around the State with a large network, operating more than 18,000 buses. These buses, popularly called ST (State Transport), are the preferred mode of transport for much of the populace. In addition to the government run buses, privately run buses also ply between major towns.

In 2018, more than 27 lakh vehicles were registered in Maharashtra State out of which around 19.96 lakh were two wheelers and around 3.62 lakh four wheeler LMVs. Till 2018, around 3.3 crore vehicles are registered in the State out of which 2.41 crore are two wheelers and 46.32 lakhs four-wheeler in LMV category.

Last 3 years Statistics of Road Accidents in Maharashtra

ROAD ACCIDENTS IN MAHARASHTRA

Year	FATAL		GRIEVOUS INJURY		MINOR INJURY		WITHOUT INJURY	TOTAL ACCIDENTS
	Accident	Killed	Accident	Injured	Accident	Injured		
2016	11780	12935	13273	22273	8554	13611	6271	39878
2017	11454	12511	12333	20767	7098	11477	5171	36056
2018	12098	13261	12648	20335	6585	11030	4386	35717

The statistics at Table I shows that there was reduction in accidents and fatalities in 2017 as compared to 2016. In 2018, when compared to 2017, though there is a slight reduction in the number of accidents, there has been an alarming increase of approx 6 % in accidental deaths on Maharashtra roads.

Road accident is most unwanted thing to happen to a road user, though they happen quite often. The most unfortunate thing is that one doesn't learn from their mistakes on road. The laxity on part of road users leads to accidents and crashes. Main cause of accidents and crashes are due to human errors.

It is observed that following are the most common behaviour of Road drivers, which lead to accidents.

- Over Speeding
- Drunken Driving
- Jumping Signals-Red Light
- Avoiding Safety Gears like Seat belts and Helmets.
- Non-adherence to Lane Driving and Overtaking in a wrong manner.

"No Parking" violation, Over Speeding, Riding Without Seat Belts, Signal Jumping, and two wheeler riders without helmet are among the top five traffic rules which people usually violate and get fined.

Highest number of accidents, 3400 and 3224 respectively and fatalities, 1286 and 1248 respectively occurred in the month of May and December. It is observed that during holidays the ensuing additional number of vehicles on less acquainted roads is the reason of these accidents.

Pune (Rural), Ahmednagar and Nashik (Rural) contribute 22% of road accidents. Ahmednagar has maximum accidents in terms of number of vehicles registered in that district.

Lowest accidents occurred in July (2394) and fatalities in August (877), as due to rainy season there may be less vehicles on roads. Also, transportation of agricultural produce is also less during this period.

The number of accidents in rural areas is more than that in urban areas. In rural area, mostly on National and State Highway, the good condition of roads lead to high speeds and more accidents.

Most of the accidents occurred during day time. 58% accidents happened during day time and 42% accidents happened during night time. Maximum fatalities were observed in accidents that happened between 18.00 Hrs to 21.00 Hrs, resulting in 17% people killed.

87% accidents happened in Sunny or clear day light and 10% happened in rainy weather condition.

30% accidents happened on National Highways and 26% accidents happened on State Highway.

114 people were killed on Mumbai Pune Express Way in 2018.

23% people were killed in accident in residential area and 39% killed in market or commercial area especially in cities.

11.4% died in accident on curved road 3.64 % died where road is under construction. 166 people died due to pot holes on roads.

Highest number of accidents happened at T-Junctions in the State. A startling 57% accident at T-Junction results in Fatal or Grievous injuries. 883 people killed at Four Arm or Square Junction. 477 died while jumping the red light.

120 people were killed on Zebra Crossing by speeding vehicles and 148 killed on footpath by dangerous drivers ramming on pedestrian on footpath.

Of the 5243 people killed in two wheeler accident, the main reason was not wearing a helmet. 2450 people killed in Light Motor vehicle i.e. Cars, Jeeps etc. 1719 were killed in accidents involving Trucks or Heavy Vehicles. In 1689 registered accident of buses 523 people died.

34% of accidents happened involving vehicles that were 5-10 year old and 32% of new vehicles which were up to 5 year old.

2331 people died in 4960 accident of overloaded vehicle. It includes overloaded goods vehicles and vehicles carrying more passengers. Over-speeding or negligence of traffic related rules could be the primary reason for high number of accidents by normally loaded and empty vehicles.

67% of crashes involved are vehicle to vehicle collision and 30% between vehicles to pedestrian collision in which 2515 pedestrians died.

Among the top three reasons in collision, 2527 deaths occurred in 6258 cases of Hit & Run. 2642 people were killed in 8020 cases of crashes in which vehicle hit from rear end. 4035 people died in 9542 cases of Head-on collision. 664 accidents happened with hitting parked vehicles.

Not using appropriate safety devices i.e. helmet is the main cause of fatality in two wheeler accidents. 5252 (39.6% of the total deaths) people were killed because they did not wear helmet. 1656 people died because they had not belted in four-wheelers.

Out of total deaths in road crashes, 87% are males and 13% are females. Of this, 73% are of the age group of 18-45 years.

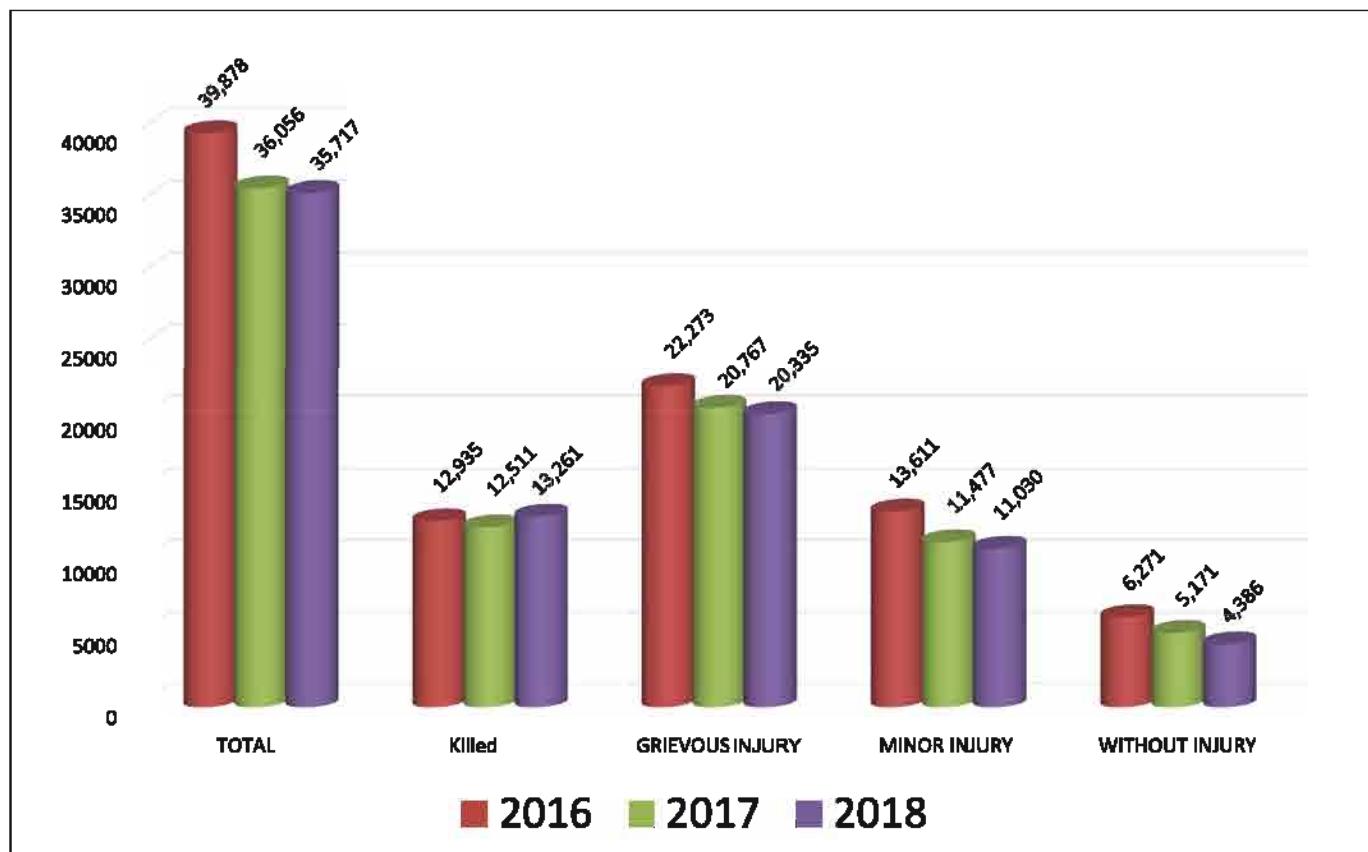

Enforcement of traffic rules by Traffic Police has an important role in order to inculcate discipline among the drivers and commuters further to reduce accidents. In 2018, in the State, a total of 1,07,28,119 cases were made against those who had violated traffic rules and fine collected to the tune of Rs.209,24,82,982/- . For over-speeding 7,84,913 people were booked and fine of Rs.12,11,45,101/- had been collected. 85,800 people were booked under Drunk and Driving cases and fine to the tune of Rs.15,92,61,900/- was collected. 5,20,587 cases were made against those who were not wearing seat-belt and 3,60,5553 cases were made against those who were not wearing safety gear like helmet. 2,13,711 people were booked for using mobile phone while driving. 4,33,741 cases were made against those who violated the norms of traffic signal.

Highest number of cases had been registered against people parking vehicles in "No Parking" area. More than 19 Lakhs cases were registered for No Parking violation in Maharashtra during 2018.

Over-speeding is one of the leading causes of road accidents and deaths across India and Maharashtra. Close to 8 Lakhs cases got into the files of traffic police of Maharashtra in 2018. However, many other cases of over-speeding remain untraced.
